

SENG550 Assignment 1

Contribution

| Student Name | UCID | Sections Contributed |
|---------------|----------|--|
| Zach Pelkey | 30156783 | Q1, Q2, Q3 |
| Hamza | 30144227 | Q4, Q5, Q6 |
| Nicola Savino | 30129329 | Q7, Q8 Document Creation + submission & verification |

Question 1

1. Create a new database groupX db.

2. Create a students table with columns: id, name, age, major.

```
CREATE TABLE students (
  id      SERIAL PRIMARY KEY,
  name    TEXT    NOT NULL,
  age     INT     NOT NULL,
  major   TEXT    NOT NULL
);
```

3. Insert at least 4 rows of data.

```
INSERT INTO students (name, age, major) VALUES
('John', 19, 'Arts'),
('Mark', 27, 'Computer Science'),
('Luke', 21, 'Engineering'),
('Matthew', 18, 'Engineering');
```

4. Queries:

- Show all students.

```
--Question 1 Queries
SELECT * FROM students;
```

| | id [PK] integer | name text | age integer | major text |
|---|--------------------|--------------|----------------|-------------------|
| 1 | 1 | John | 19 | Arts |
| 2 | 2 | Mark | 27 | Computer Scien... |
| 3 | 3 | Luke | 21 | Engineering |
| 4 | 4 | Matthe... | 18 | Engineering |

- Show students older than 21.

```

21
22 SELECT * FROM students WHERE age > 21;
23

```

Data Output Messages Notifications

Showing rows: 1 to 1 Page No: 1 of 1

| | id [PK] integer | name text | age integer | major text |
|---|--------------------|--------------|----------------|-------------------|
| 1 | 2 | Mark | 27 | Computer Scien... |

- Show only names of students in “Computer Science”

```

23
24 SELECT name FROM students WHERE major = 'Computer Science';
25
26 -- --Question 2

```

Data Output Messages Notifications

Showing rows: 1 to 1 Page No: 1 of 1

| | name text |
|---|--------------|
| 1 | Mark |

Question 2

1. Add a new column email.

```

--Question 2
ALTER TABLE students
ADD COLUMN email VARCHAR(100);

```

2. Update two students with valid email addresses.

```

30 UPDATE students
31 SET email = 'john@icloud.com'
32 WHERE name = 'John';
33
34 UPDATE students
35 SET email = 'mark@icloud.com'
36 WHERE name = 'Mark';

```

3. Query: list all students showing name and email only.

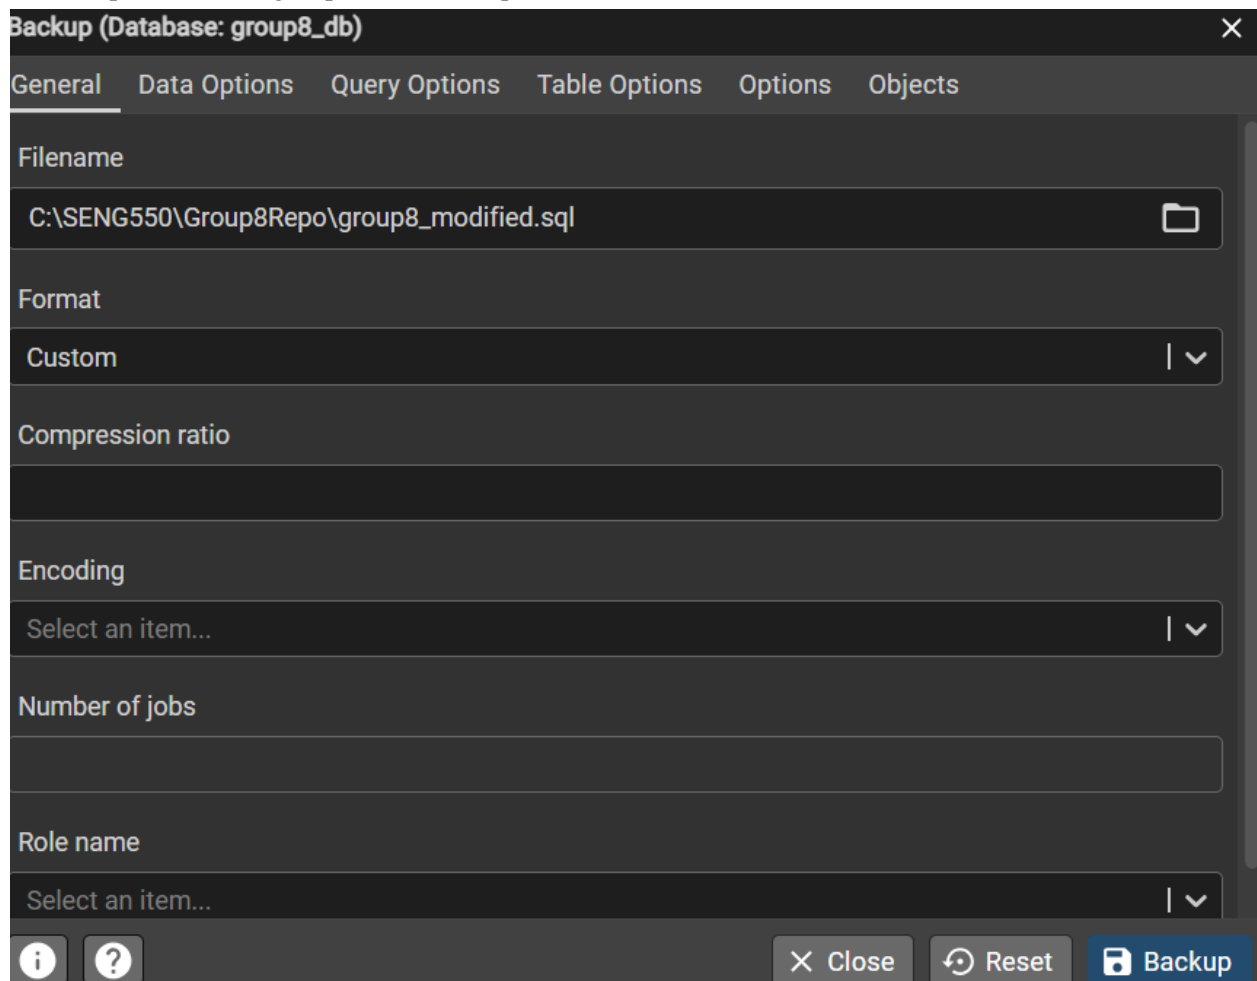

37
38 **SELECT name, email FROM students**
39

Data Output Messages Notifications

Showing rows: 1 to 4 Page No: 1 of 1

| | name text | email character varying (100) |
|---|--------------|----------------------------------|
| 1 | Luke | [null] |
| 2 | Matthe... | [null] |
| 3 | John | john@icloud.com |
| 4 | Mark | mark@icloud.com |

4. Backup database as groupX modified.sql.

Question 3

1. Create groupX copy.

3. Queries:

- Show all rows from students.

group8_copy/postgres@PostgreSQL 17

Query Query History

```
38 SELECT name, email FROM students
39
40 --Question 3
41 SELECT * FROM STUDENTS
```

Data Output Messages Notifications

Showing rows: 1 to 4 Page No: 1 of 1

| | id [PK] integer | name text | age integer | major text | email character varying (100) |
|---|--------------------|--------------|----------------|-------------------|----------------------------------|
| 1 | 3 | Luke | 21 | Engineering | [null] |
| 2 | 4 | Matthe... | 18 | Engineering | [null] |
| 3 | 1 | John | 19 | Arts | john@icloud.com |
| 4 | 2 | Mark | 27 | Computer Scien... | mark@icloud.com |

- Count the total number of students in this copy.

group8_copy/postgres@PostgreSQL 17

Query Query History

```

41 SELECT * FROM STUDENTS
42
43 SELECT COUNT('*') FROM STUDENTS
44

```

Data Output Messages Notifications

Showing rows: 1 to 1 Page No: 1 of 1

| | count bigint |
|---|-----------------|
| 1 | 4 |

Question 4

1. Create products.csv with at least 8 products. Columns: product id,name,price.

```

Group8Repo > Assignment1 > products.csv
1  product_id,name,price
2  1,Apple,1.00
3  2,Orange,1.20
4  3,Banana,0.80
5  4,Grapes,2.50
6  5,Kiwi,1.40
7  6,Strawberries,2.00
8  7,Peach,2.10
9  8,Blueberries,2.70

```

2. Create products table and import the CSV.

```
-- Question 4
CREATE TABLE products(
    product_id int UNIQUE,
    name TEXT NOT NULL,
    price FLOAT NOT NULL
);
```

3. Queries:

- Show all products.

58 **SELECT * FROM products**

59

Data Output Messages Notifications

Showing rows: 1 to 8 Page No: 1 of 1

| | product_id integer | name text | price double precision |
|---|-----------------------|---------------|---------------------------|
| 1 | 1 | Apple | 1 |
| 2 | 2 | Orange | 1.2 |
| 3 | 3 | Banana | 0.8 |
| 4 | 4 | Grapes | 2.5 |
| 5 | 5 | Kiwi | 1.4 |
| 6 | 6 | Strawberri... | 2 |
| 7 | 7 | Peach | 2.1 |
| 8 | 8 | Blueberries | 2.7 |

- Show products cheaper than 2.00.

```

60 SELECT * FROM products WHERE price < 2.00
61
62
63

```

Data Output Messages Notifications

Showing rows: 1 to 4 Page No: 1 of 1

| | product_id integer | name text | price double precision |
|---|-----------------------|--------------|---------------------------|
| 1 | 1 | Apple | 1 |
| 2 | 2 | Orange | 1.2 |
| 3 | 3 | Bana... | 0.8 |
| 4 | 5 | Kiwi | 1.4 |

- Find the maximum product price.

```

62 SELECT MAX(price) as MaximumPrice FROM products
63

```

Data Output Messages Notifications

Showing rows: 1 to 1 Page No: 1 of 1

| | maximumprice double precision |
|---|----------------------------------|
| 1 | 2.7 |

Question 5

Delete one student from students.

```

--Question 5
DELETE FROM students WHERE name = 'John';

```

Query all remaining students ordered by age descending.

```
67 SELECT * FROM students ORDER BY AGE DESC;
68
69
70
```

Data Output Messages Notifications

Showing rows: 1 to 3 Page No: 1 of 1

| | id [PK] integer | name text | age integer | major text | email character varying (100) |
|---|--------------------|--------------|----------------|-------------------|----------------------------------|
| 1 | 2 | Mark | 27 | Computer Scien... | mark@icloud.com |
| 2 | 3 | Luke | 21 | Engineering | [null] |
| 3 | 4 | Matthe... | 18 | Engineering | [null] |

Query: show only the youngest student.

```
69 SELECT *
70 FROM students
71 WHERE age = (SELECT(MIN(age)) FROM students)
72
```

Data Output Messages Notifications

Showing rows: 1 to 1 Page No: 1 of 1

| | id [PK] integer | name text | age integer | major text | email character varying (100) |
|---|--------------------|--------------|----------------|---------------|----------------------------------|
| 1 | 4 | Matthe... | 18 | Engineeri... | [null] |

Question 6

1. Query: number of students per major.

```

73  --Question 6
74  SELECT major, COUNT('*') FROM students GROUP BY major;
75
76

```

Data Output Messages Notifications

Showing rows: 1 to 2 Page No: 1 of 1

| | major text | count bigint |
|---|-------------------|-----------------|
| 1 | Engineering | 2 |
| 2 | Computer Scien... | 1 |

2. Query: average price of products.

```

76  SELECT AVG(price) as averageprice from products;

```

Data Output Messages Notifications

Showing rows: 1 to 1 Page No: 1 of 1

| | averageprice double precision |
|---|----------------------------------|
| 1 | 1.7125 |

3. Query: total value of all products combined (SUM(price)).

```

78  SELECT SUM(price) as Total from products;
79
80

```

Data Output Messages Notifications

Showing rows: 1 to 1 Page No: 1 of 1

| | total double precision |
|---|---------------------------|
| 1 | 13.7 |

Question 7

1. Create an enrollments table with columns: enroll id, student id (FK), course.

```
80  -- Question 7 -
81  CREATE TABLE enrollments (
82      enroll_id    SERIAL PRIMARY KEY,
83      student_id   INT REFERENCES students(id),
84      course       TEXT NOT NULL
85  );
```

2. Insert at least 3 rows linking students to courses.

```
INSERT INTO enrollments (student_id, course)
SELECT id, 'CPSC 453' FROM students WHERE name = 'Mark';

INSERT INTO enrollments (student_id, course)
SELECT id, 'SENG 550' FROM students WHERE name = 'Luke';

INSERT INTO enrollments (student_id, course)
SELECT id, 'SENG 550' FROM students WHERE name = 'Matthew';

INSERT INTO enrollments (student_id, course)
SELECT id, 'ENSF 460' FROM students WHERE name = 'Matthew';
```

3. Query using JOIN: list student name and their course.

```
98  SELECT students.name, enrollments.course
99  FROM enrollments
100  JOIN students ON students.id = enrollments.student_id
101  ORDER BY students.name, enrollments.course;
```

Data Output Messages Notifications

Showing rows: 1 to 4 Page No: 1 of 1

| | name text | course text |
|---|--------------|----------------|
| 1 | Luke | SENG 5... |
| 2 | Mark | CPSC 4... |
| 3 | Matthew | ENSF 460 |
| 4 | Matthew | SENG 5... |

4. Query: show only students who are enrolled in more than one course

```
102
103 SELECT students.name
104 FROM enrollments
105 JOIN students on students.id = enrollments.student_id
106 GROUP BY students.name
107 HAVING COUNT(*) > 1
```

Data Output Messages Notifications

Showing rows: 1 to 1 Page No: 1 of 1

| | name text |
|---|--------------|
| 1 | Matthew |

Question 8

1. Insert yourself as a student in the students table.

```
-- Question 8
INSERT INTO students (name, age, major)
VALUES ('Nicola Savino', 22, 'Software Engineering')
```

2. Add one new product in the products table.

```
INSERT INTO products (product_id, name, price)
VALUES (9001, 'Monitor', 150);
```

3. Create a view called cs students that shows only students with major = "Computer Science".

```
CREATE VIEW "cs_students" AS
SELECT *
FROM students
WHERE major = 'Computer Science';
```

4. Query the view.

```
120  
121 SELECT * FROM "cs_students";  
122
```

Data Output Messages Notifications

Showing rows: 1 to 2 Page No: 1 of 1

| | id integer | name text | age integer | major text | email character varying (100) |
|---|---------------|----------------|----------------|-------------------|----------------------------------|
| 1 | 2 | Mark | 27 | Computer Scien... | mark@icloud.com |
| 2 | 6 | Nicola Savi... | 22 | Computer Scien... | [null] |
